Cochrane Database Syst Rev. 2023;3:CD013258. Original review: https://doi.org/10.1002/14651858.CD013258.pub2. Systematic review of 22 RCTs (8,463 older adults; 10 countries), with an especially favorable subgroup of those selected for higher fall risk; no demonstrated fall-rate reduction in unselected groups. Some other outcomes and intervention components remained uncertain.

57. Cockayne S, Pighills A, Adamson J, et al. Home environmental assessments and modification delivered by occupational therapists to reduce falls in people aged 65 years and over: the OTIS RCT. Health Technol Assess. 2021;25(46):1-118. Original

trial: https://doi.org/10.3310/hta25460. Pragmatic multicentre English randomized trial (n=1,331), with no fall-rate benefit versus usual care; self-reported falls and incomplete/variable adoption of recommendations limit interpretation. Contrasting null trial, not proof that all hazard interventions are ineffective.
